

- Which one of the following is the fastest way to create and configure a Record Producer? - **Open the table in the Table records and select the Add to Service Catalog Related Link**
 - Which one of the following is the baseline behavior of a table in a privately-scoped application? - **All application scopes can read from the table**
 - When configuring a module, what does the Override application menu roles configuration option do? - **Users with the module role but without access to the application menu access the module**
 - Which of the following features are available to Global applications? – **Automated Test Framework, Flow Designer**
 - What is a Module? - **The functionality within an application menu such as opening a page in the content frame or a separate tab or window.**
 - Statements on Delegated Development – Correct Statements- **Administrators can specify which application file types the developer can access. Administrators can grant the developer access to script fields. Administrators can grant the developer access to security records.** Incorrect - **Administrators can grant non-admin users the ability to develop global applications**
- ```
(function executeRule (current, previous */null when async*/) {
 // ...
}) (current, previous);
```
- The above business rule template is -> **Self-invoking**
- What are some of the benefits of extending an existing table such as the Task table when creating a new application? - **You can repurpose existing fields by simply changing the label. Use existing fields with no modifications. Existing logic from the parent table will be automatically applied to the new table**
  - Which method call returns true only if the currently logged in user has the catalog\_admin role and in no other case? **g\_user.hasRoleExactly('catalog\_admin')**
  - How must Application Access be configured to prevent all other private application scopes from creating configuration records on an application's data tables? **Set the Accessible from field value to This application scope only**
  - It is best practice to define the business requirements and the process(es) an application will manage as part of the application development plan. What are some of the considerations to document as part of the business process? - **Business problem, data input/output, users/stakeholders, and process steps**
  - To see what scripts, reports, and other application artifacts will be in a published application: **Examine the Application Files Related List in the application to be published**
  - Application developers configure ServiceNow using industry standard JavaScript to... **Extend and add functionality**
  - Which of the following are configured in an Email Notification? **Who will receive the notification. What content will be in the notification. When to send the notification.**
  - Which of the following CANNOT be debugged using the Field Watcher? **Script Includes. CAN → Business Rules, Client Scripts, Access Controls**
  - Which of the following is NOT supported by Flow Designer? **Test a flow with roll back, Automated Test Framework**
  - Which of the following statements does NOT apply when extending an existing table? **You must script and configure all required behaviors**
  - Which of the following are true for reports in ServiceNow? **Can be a graphical representation of data. Can be run on demand by authorized users. Can be scheduled to be run and distributed by email.**
  - Which of the following is NOT a trigger type in Flow Designer? - **Outbound Email**
  - One of the uses of the ServiceNow REST API Explorer is: **Create sample code for sending REST requests to ServiceNow**
  - Which platform feature can be used to determine the relationships between field in an Import Set table to field in an existing ServiceNow table? **Transform Maps**
  - When configuring an Access Control which has no condition or script, which one of the following statements is NOT true? **table.id will grant access to a specific record on the table**
  - Which source control operation is available from BOTH Studio and the Git Repository? **Create Branch.**
  - When creating new application files in a scoped application, cross scope access is turned on by default in which of the following? – **Table**
  - Which one of the following is true? **UI Policy's Scripts execute before the UI Policy's Actions**

- When evaluating Access Controls, ServiceNow searches and evaluates: **From the most specific match to the most generic match**
- Which Report Type(s) can be created by right-clicking on a column header in a table's list? **Bar Chart and Pie Chart**
- When working in the Form Designer, configuring the label of a field in a child table changes the label on which table(s)? **child Table**
- In an Email Notification, which one of the following is NOT TRUE for the Weight field? **Weight value of zero means that no email should be sent**
- In an Email Notification, which one of the following is TRUE for the Weight field? **Only Notifications with the highest weight for the same record and recipients are sent. The Weight value defaults to zero. Weight value of zero means the Notification is always sent when the Notification's When to send criteria is met**
- Which of the following methods are useful in Access Control scripts? **gs.hasRole() and current.isNewRecord()**
- Modules must have a Link type. Which one of the following is a list of Link types? **Assessment, List of Records, Separator, Timeline Page**
- Which one of the following is part of the client-side scripting API? **GlideUser object (g\_user)**
- Which objects can you use in a Scheduled Script Execution (Scheduled Job) script? **GlideSystem and GlideRecord**
- Which one of the following is true for GlideUser (g\_user) methods? **Can be used in Client Scripts and UI Policies only**
- Which of the following statements is true for the Form Designer? **To add a field to the form layout, drag the field from the Fields tab to the desired destination on the form. To create a new field on a form's table, drag the appropriate data type from the Field Types tab to the form and then configure the new field. To remove a field from the form layout, hover over the field to enable the Action buttons, and select the Delete (X) button.**
- Which of the following methods prints a message on a blue background to the top of the current form by default? **g\_form.addInfoMessage()**
- There is a basic strategy when creating a Utils Script Include. Identify the step that does not belong. **Identify the table Steps -> Create a class -> Create a prototype object from the new class -> Script the function(s)**
- In a Business Rule, which one of the following returns true if the currently logged in user has the admin role? **gs.hasRole('admin')**
- When a ServiceNow instance requests information from a web service, ServiceNow is the web service: **Consumer**
- Which of the following objects does a Display Business Rule NOT have access to? **Previous**
- Which one of the following is NOT a method used for logging messages in a server- side script for a privately- scoped application? **gs.log()**
- What syntax is used in a Record Producer script to access values from Record Producer form fields? **producer.variableName**
- Which one of the following is true for a Script Include with a Protection Policy value of Protected? **The Protection Policy is applied only if the application is downloaded from the ServiceNow App Store**
- Which one of the following is true regarding Application Scope? **Applications downloaded from 3rd party ServiceNow application developers cannot have naming conflicts**
- Which objects can be used in Inbound Action scripts? **current and email**
- Which Application Access configuration field(s) are NOT available if the Can read configuration field is NOT selected? **Can create, Can update, and Can delete**
- Which one of the following client-side scripts apply to Record Producers? **Catalog Client Scripts and Catalog UI Policies**
- From the list below, identify one reason an application might NOT be a good fit with ServiceNow. **The application: Requires "as-is" use of low-level programming libraries**
- Which one of the following is NOT a UI Action type? **Form**
- Which one of the following is a UI Action type? **List Choice, Form Button, List Banner**
- Which one of the following is NOT a purpose of application scoping? **Provide a way of tracking the user who developed an application**
- Which one of the following is a purpose of application scoping? **Provide a relationship between application artifacts . Provide a namespace (prefix and scope name) to prevent cross application name collisions . Provide controls for how scripts from another scope can alter tables in a scoped application**
- Which one of the following is true for a table with the "Allow configuration" Application Access option selected? **Out of scope applications can create Business Rules for the table**

- When configuring the content of an Email Notification, which syntax should be used to reference the properties of an event triggering the Notification? **`${event.}`**
- A scoped application containing Flow Designer content dedicated to a particular application is called a(n): **Spoke**
- The source control operation used to store local changes on an instance for later application is called a(n). **Stash**
- Which one of the following is NOT required to link a ServiceNow application to a Git repository? – **Application Name**
- When configuring a REST Message, the Endpoint is: **The URI of the data to be accessed, queried, or modified**
- Which roles grant access to source control repository operations such as importing applications from source control, or linking an application to source control? (Choose two.) – **source\_control, admin**
- Which one of the following is NOT a debugging strategy for client-side scripts? **`gs.log()`;**
- Which one of the following is a debugging strategy for client-side scripts? **`g_form.addInfoMessage()` , Field Watcher ,`jslog()`**
- If the Create module field is selected when creating a table, what is the new module's default behavior? **Display a list of all records from the table**
- How many applications menus can an application have? **1, which is used for all application modules**
- which of the following is not a way to install an application on SNOW instance? **select the copy button on the application record**
- which of the following is a way to install an application on SNOW instance? **download and install a 3rd party application from the SNOW store. Download and install an application from SNOW share web site. Install an application from application repository.**
- true about application picker and application scope? **select an application from the application picker sets the application scope**
- which of the following is not a caller access field option? **Caller permission**
- which of the following is a caller access field option? **Caller tracking, caller restrictions.**
- Which of the following is true about deleting field from table? **user defined non inherited field can be deleted.**
- What are some of the considerations to document as part of the business process? **Business problem, data input/output, users/stakeholders, and process steps**
- Which one of the following is true for a Script Include with a Protection Policy value of Protected? **The Protection Policy is applied only if the application is downloaded from the ServiceNow App Store**
- Why create custom applications? **To replace outdated, inadequate, custom business applications and processes . To extend service delivery and management to all enterprise departments . To extend the value of service now**
- which option available feature in studio? **Search control, Push to source control**
- Benefits of storing the majority of application? **1)only run when called 2)the script logic is hidden 3)changes to application logic made at single place**
- ways to respond the event generated? **Script Action, Email Notification**
- In SOAP message, which syntax indicates a variable when the function is called – **`${variable_name}`**
- Table.none -> Admin and ITIL ; Table.\* -> Admin ; Table.u\_field\_3 -> ITIL . What ITIL can see? **Field 3 only**
- Service Now can EXPORT the data of file types? **Excel , CSV ,REST, SOAP API data**
- Method used for sysID - **`gs.getUserID()`**
- Task table is - **Parent and Base table**
- Which of the following is not a way for data to be entered into a service now application? **Java package call**
- which of the following is correct? **`get( )` , `_query( )` , `query( )`**
- Using update set can we access for medication in SDLC artifacts? **True**
- method to retrieve System property? **`gs.getProperty()`**
- Table creation options - **extend the table , create table from scratch ,uploading spreadsheet**
- which of the following methods Creates the response body in resource script? **SetBody**
- Record producer directly added to mobile catalog? – **false**
- when selecting the data type for a field that will be displayed on the form which of the following statement is not correct? **use the data type to enter the data and time of the day**
- Available activities are displayed in which tabs in the workflow editor palatte? **Custom ,core,packs**
- Graphical representation of relationship between tables is? **Schema Map**

- Which of the following are automatically created when an application is created using Guided Application Creator(GAC)? **Default access controls for the application is created**
- How do you identify the properties of an event in an email notification being generated? **event.<property\_name>**
- For Application Access there is a configuration option called Allow access to this table via web services. Which one of the following statements is true when the option is selected? **The user performing the query via web services must have the correct permissions to access the table's records**
- ACL execution order - **Roles, condition , Scripts**
- Which one of the following is the baseline behaviour of a table in a privately-scoped application? **All application scopes can read from the table**
- Which is one that performs debug logging in server side ? **gs.debug()**
- You are developing the MyApp application that has a table, Table A. When the MyApp application is installed on an instance you want Table A's records to be installed as part of the Application. Table A's records will be installed when? **Table A is active and extends the Task table**
- To see what scripts, reports, and other application artifacts will be published applications? **Examine the Application Files Related List in the Application to be Published.**
- Which one is not a use case for Scheduled job ? **Executing a client-side script every day**
- What is displayed in an application picker? **All servicenow applications including baseline application like incident**
- Which server-side object provides methods for working with dates opened when writing scripts in a privately scoped application? **GlideDateTime**
- What is NOT included in ServiceNow REST API? **COPY**
- Script Actions are only triggered by events? T/F? **True**
- What does g\_user.hasRole('x\_Myapp\_scope') returns? **Returns true if the user has x\_Myapp\_scope or if the user has admin rule**
- When creating a table in a privately-scoped application, which of the four Access Controls are created for the table? **Create, Delete, Read and Update**
- What are some benefits of extending an existing table such as the Task table when creating a new application? **You can re-purpose existing fields by simply changing the label, Use existing fields with no modifications**
- Application developers can specify which ServiceNow page a user sees after submitting a new record using the Record Producer UI. How is the page specified? **Write a script in the Record Producer's script field: producer.redirect = 'URL'**
- What are web services? **Methods used to allow applications to connect to other software applications over a network.**
- Object cannot be controlled by access controls? **Query**
- If one authentication is done, no more authentications needed – **False**
- What are the three things that tables manage? **Extensibility, Numbering, Security**
- What are the 3 components of the Mobile UI? **Application Navigator, User Profile, Favorites**
- Notifications are sent out by the \_\_\_\_\_ to the reviewers group when? **A push requires code review, A user cancels a push.**
- Which of the following is not ui action? **form choice**
- Which option is not present when we are linking an application from the source Control? **apk name**
- Not available in form designer -> **Schema Map**
- Organize fields on a form by using ? **Sections**
- which of the following helps user while filling form—**annotations**
- Which one of the following is NOT a purpose of application scoping? **Provide Controls for how scripts from another scope can alter tables in scoped application.**
- Which one of the following is true regarding Application Scope? **Developers can choose the prefix for a scope's namespace**
